Frontier BioStrategy and Sable Fermentation Announce Strategic Alliance to Serve Biological Technology Innovators

RALEIGH, NC — June 9, 2026 — Frontier BioStrategy LLC and Sable Fermentation, Inc. today jointly announced a strategic alliance dedicated to better serving the biological technology companies they support. By aligning their complementary capabilities, the two firms will offer clients more coordinated access to the full range of expertise required to take biological technologies from concept through commercialization.

Frontier BioStrategy is an integrated strategic advisory firm focused on regulatory architecture, commercial strategy, and scientific product development governance for biological technology companies. Sable Fermentation is a specialist in biological fermentation scale-up, process development, downstream processing, and formulation. The two firms share a client base in agrochemicals, biologicals, and adjacent life sciences sectors, including companies developing emerging modalities such as RNAi and dsRNA platforms, gene-edited traits, peptide bioactives, novel-mode-of-action biopesticides, and next-generation biostimulants.

Biological technology developers face two adjacent but fundamentally different challenges: building a coherent regulatory and commercial strategy, and translating that strategy into reproducible, scalable production. These capabilities have historically lived in separate firms, leaving founders and executive teams to act as integrators between strategy and execution. The alliance between Frontier and Sable is built to close that gap on behalf of clients who need both, without the friction of juggling siloed providers, multiple contractual relationships, or competing recommendations.

“Frontier was founded on the premise that regulatory, commercial, and product development strategy belong under one roof rather than scattered across siloed providers. This alliance with Sable is the next logical extension of that idea, applied across firms rather than within one. Our shared clients deserve strategy and bioprocess that inform each other from day one, not in retrospect.”

— Matthew Orr, Managing Director, Regulatory, Frontier BioStrategy

“Successful biological technologies require more than good science — they require alignment between strategy, process development, and scalable manufacturing. Our alliance with Frontier creates a more integrated path for clients developing next-generation biological products, helping them move from concept to commercialization with fewer disconnects between planning and execution.”

— Toni Bucci, Founder and CEO, Sable Fermentation

Both firms will continue to operate independently and serve their existing client bases. The alliance creates a deliberate framework for collaboration where the two firms’ capabilities are most complementary, built around the needs of the clients they share.

About Frontier BioStrategy

Frontier BioStrategy LLC is an integrated strategic advisory firm for biological technology companies. The firm combines regulatory architecture, commercial strategy, and scientific product development governance under a single senior-led engagement model, with a primary focus on emerging modalities in agrochemicals, biologicals, and adjacent life sciences sectors. Frontier is headquartered in Raleigh, North Carolina, and operates remote-first with a founding partnership team bringing more than sixty years of combined executive experience across global regulatory affairs, commercial strategy, business development, and R&D portfolio leadership. More information is available at www.frontierbiostrategy.com.

About Sable Fermentation

Sable Fermentation, Inc. is a biotechnology development and manufacturing partner specializing in fermentation process development, scale-up, downstream processing, and formulation for biologically derived products. Headquartered in Wake Forest, North Carolina, Sable helps innovators transform breakthrough technologies into scalable, commercially viable manufacturing processes by combining advanced fermentation expertise with practical scale-up capabilities. Focused on accelerating and de-risking biomanufacturing, Sable supports customers from early development through production while advancing sustainable solutions that promote global food security, environmental stewardship, and reduced reliance on petrochemical-based products.
